

Application

OSP-P RODLESS ACTUATOR

Company: Hoerbiger-Origa Partners with
R G Egan Equipment, Inc

Product: OSP-P Rodless Actuator for Automatic Roll Cleaners (**ARCs**)

Application: R.G.Egan Equipment offers a full line of ARCs designed to clean a variety of steel and plastic production rolls such as: coating rolls, calendaring rolls, laminating rolls, chill rolls, backing rolls, nip rolls.

ARCs push a clean pad or cloth against the surface of a roll several times during each production run. The goal is to remove contamination deposits from your machine roll without interrupting the process. The result is continuous roll cleaning without the need for machine shutdowns.

ARCs are automatically controlled and easily adjusted for cleaning frequency and speed, without risking operator injury or costly machine downtime. The design allows them to be mounted in any direction, requiring little space and will clean the entire roll or a single spot without damaging the roll surface.

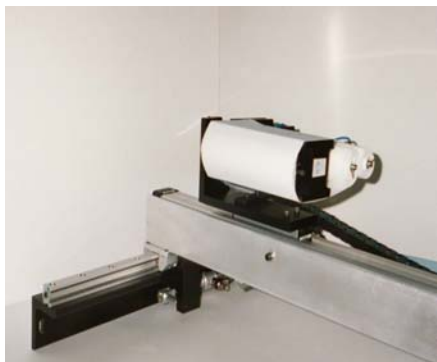

The benefits that Hoerbiger Origa and R. G. Egan can provide by choosing the Automatic Roll Cleaner are:

- Provide continuous roll cleaning without the need for machine shutdown or operator involvement
- Minimal space requirements
- Provide total automation for roll cleaning
- Make the quality of the product more consistent through the entire length of the production roll.
- Improve operator safety

Please contact Hoerbiger Origa or R.G. Egan Equipment if you require a solution to your web or roll cleaning needs.
